

IS3R 2023

Berlin/Germany

August 24–26, 2023

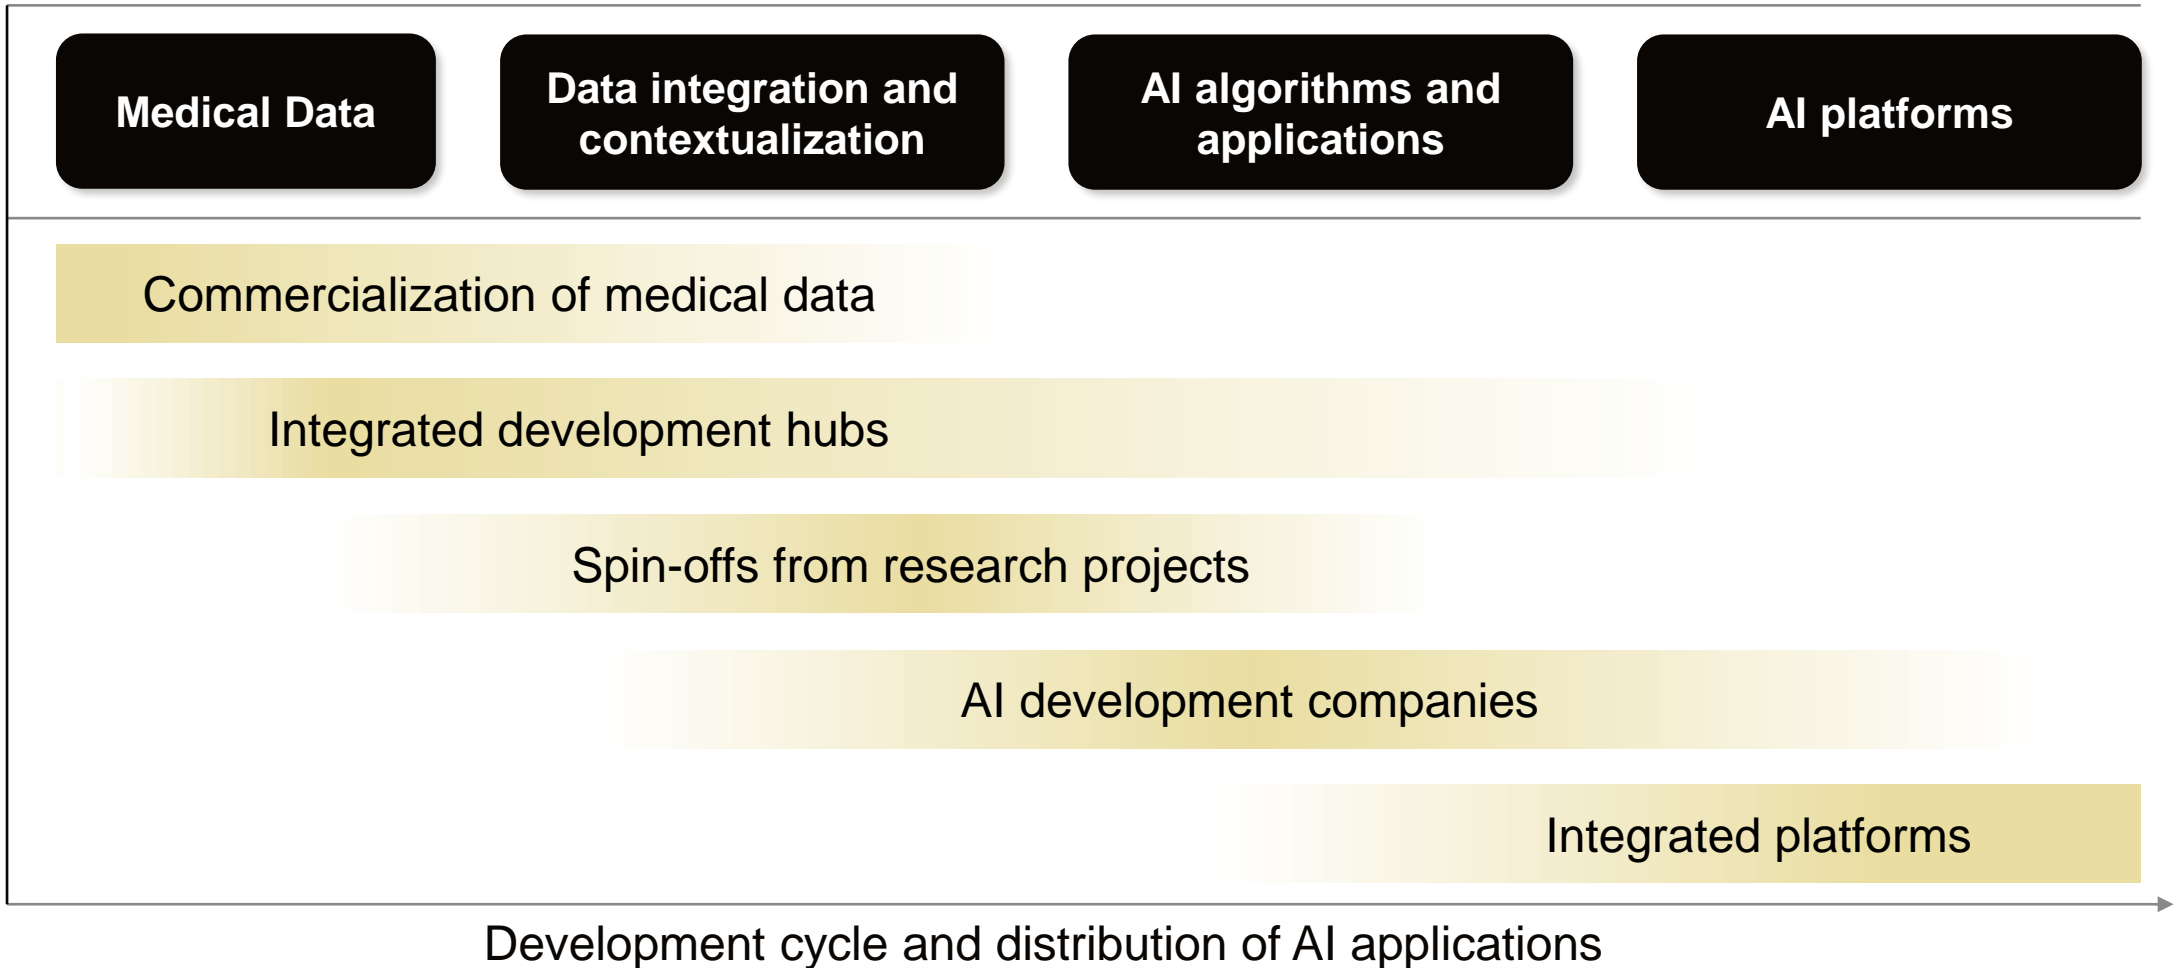

**How will
various AI
business
models affect
AI adoption
and success?**

**Prof. Dr.
Stefan Schönberg**

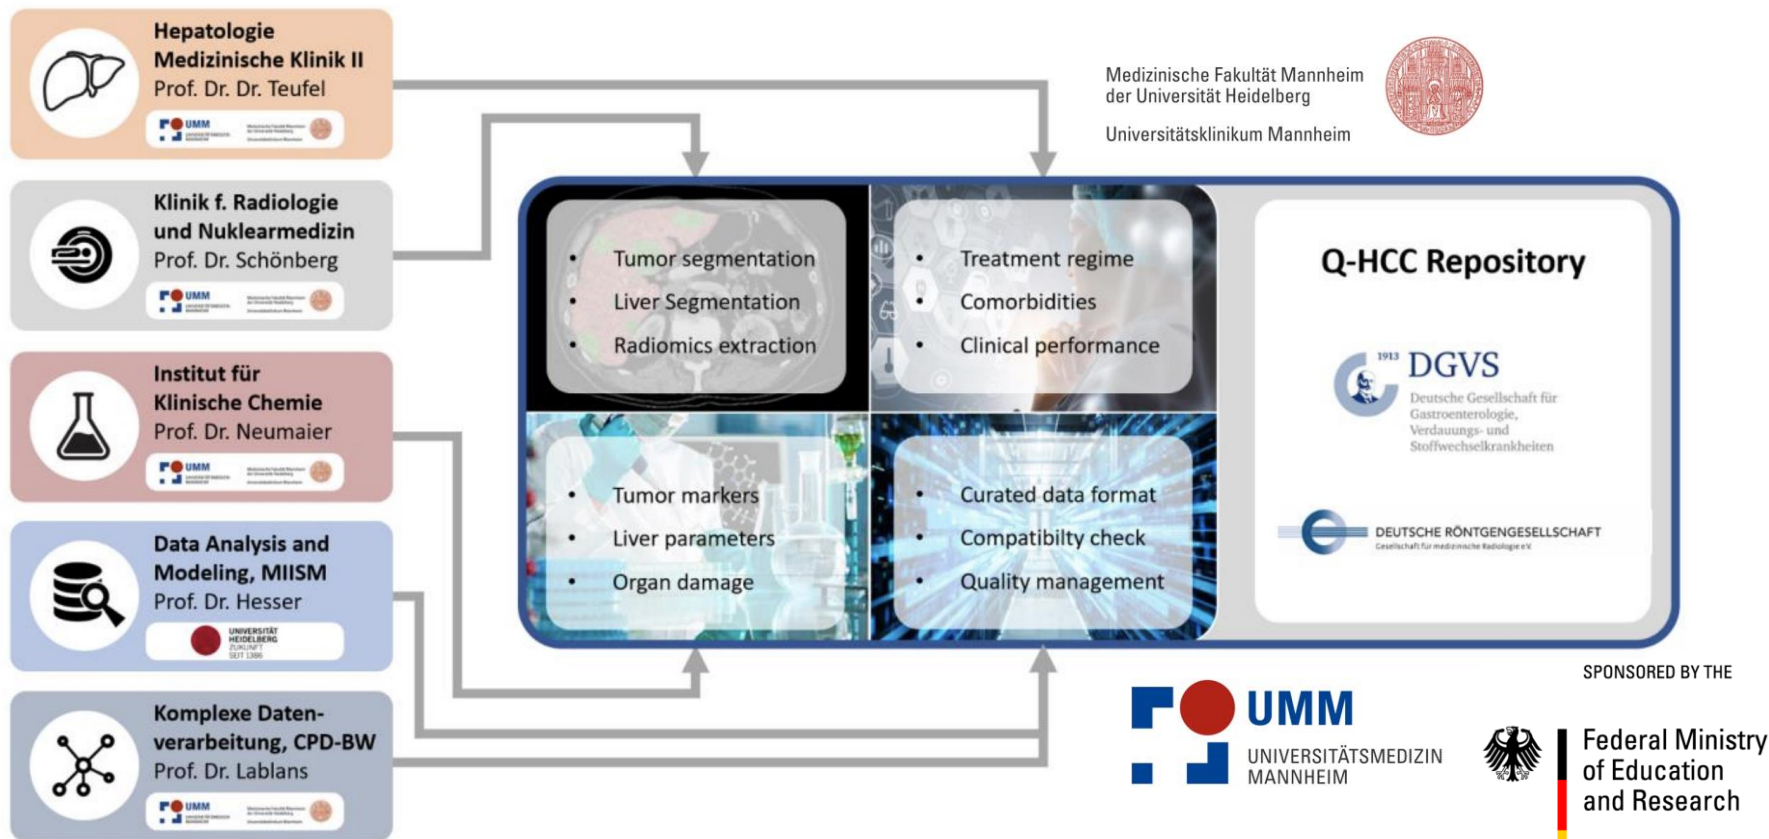

Director and Chair,
Department of Radiology
and Nuclear Medicine

University Medical Center
Mannheim

Business models of AI in radiology

Open data and AI: The Q-HCC project

- Data curation in experts' hands
- Structured and annotated multimodal medical data
- Quality control to avoid risks of bias, privacy and security

From commercialization of medical data to clinical testing of digital health apps

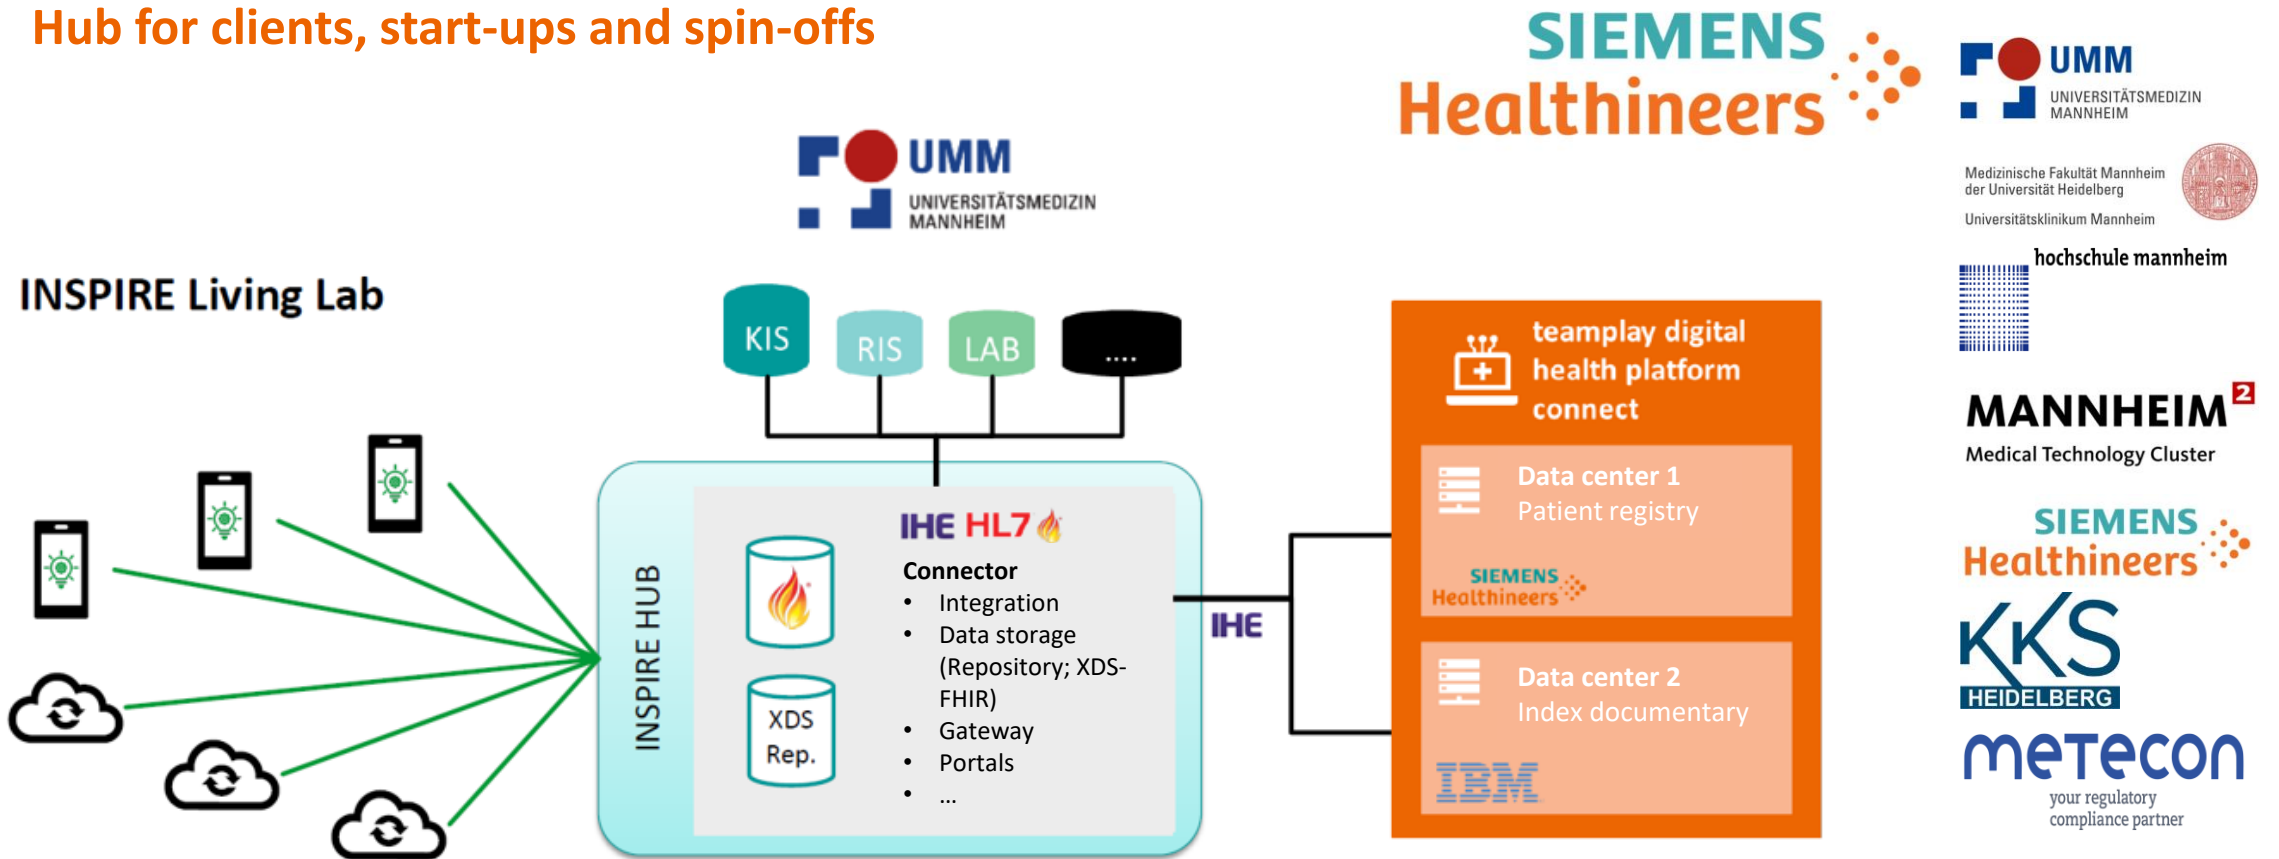

Inspire Living Lab Mannheim

- Hospital as a service contractor for AI developers
- Clinical framework for development of digital health applications
- Support of the entire workflow from provision of data to testing of algorithms

Inspire Living Lab Mannheim

Hub for clients, start-ups and spin-offs

Research spin-off: QUIBIM

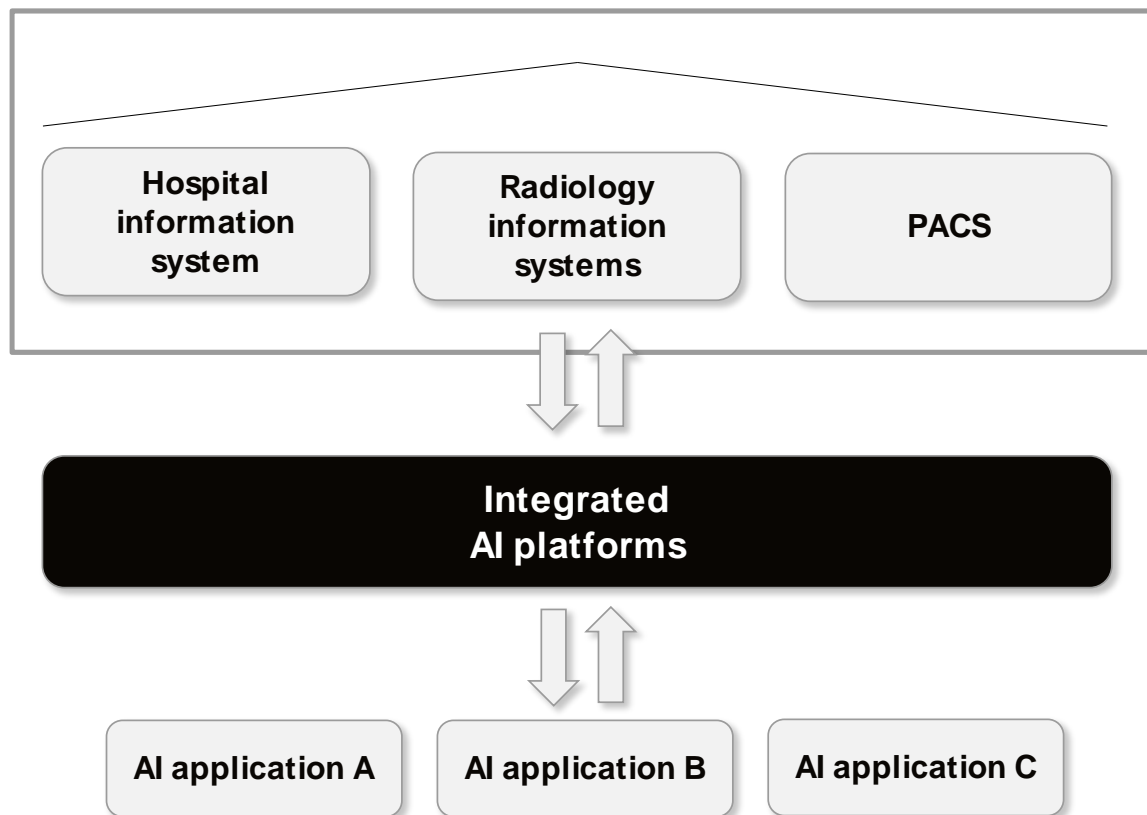

- Cloud-based AI platform
- Integrated pipeline from deidentification to quantitative image analysis to prediction and biomarker panels
- Spin-off from University of Valencia
- FDA, UKCA, and CE mark-cleared (in part)
- Applications for prostate, brain, liver, breast and lung

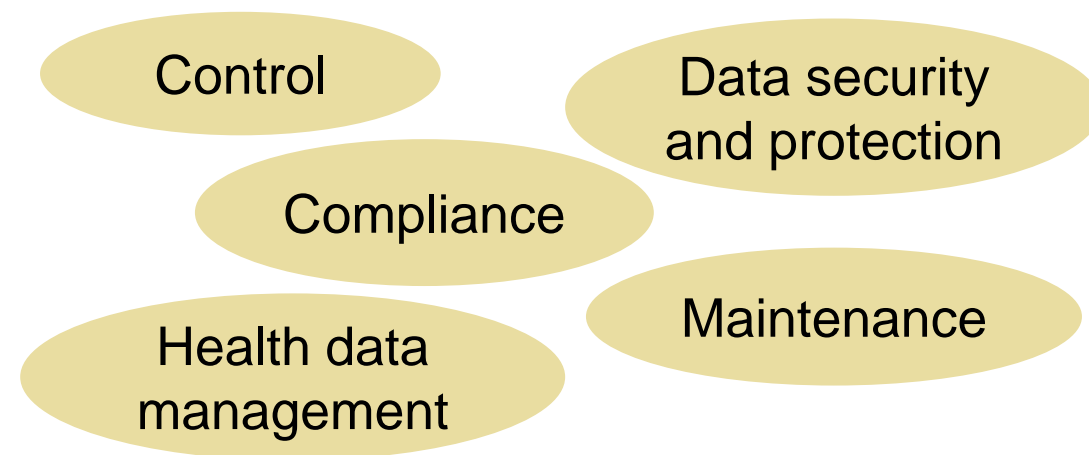

Quibim

Integration of AI applications

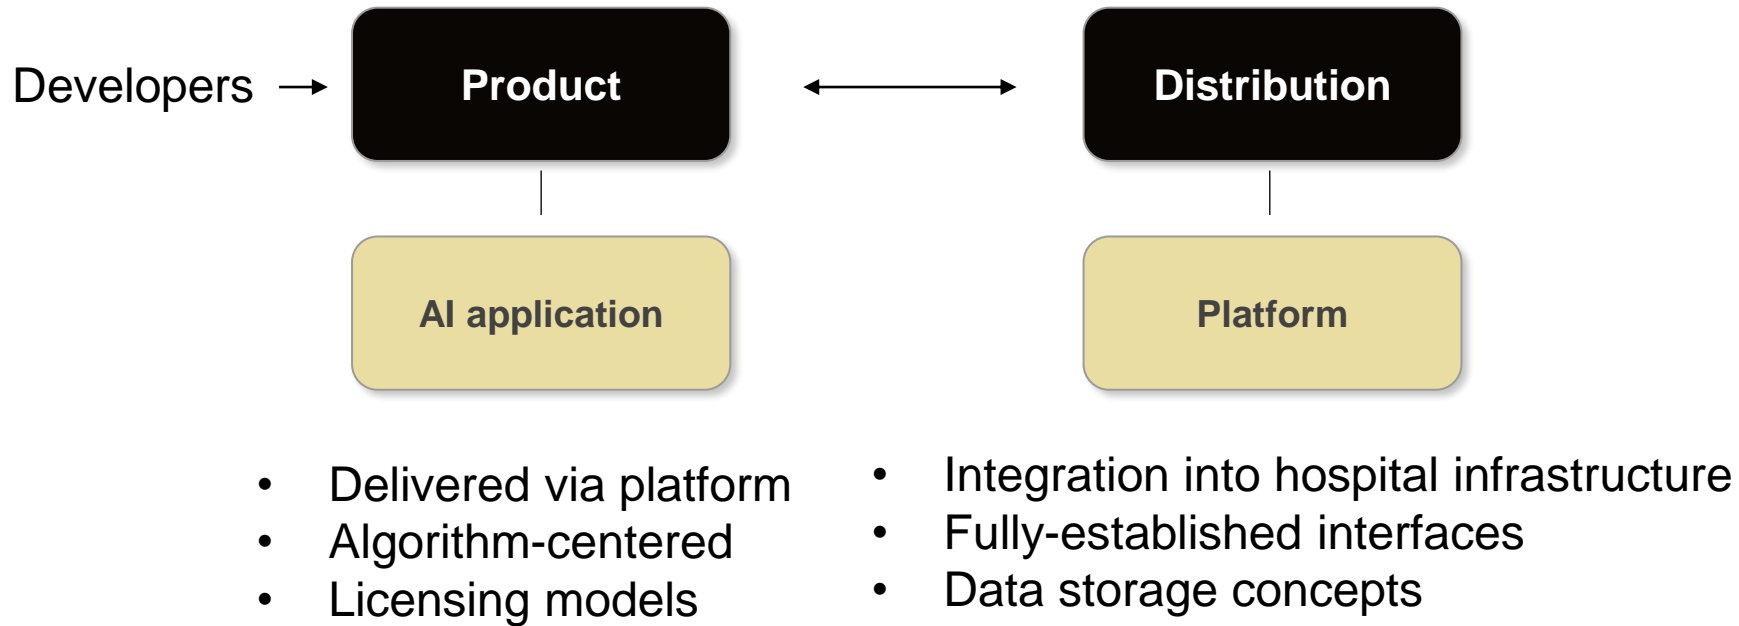

Hospital IT infrastructure

Dimensions

Platform-based distribution of AI applications

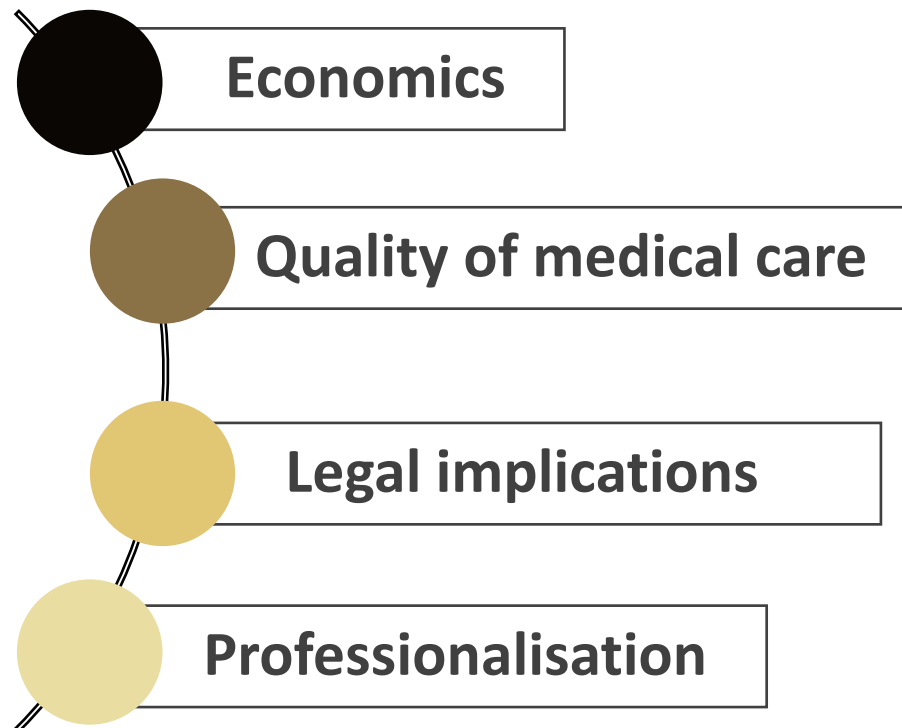

- **Developers can focus on algorithms and AI development**
- **Distribution and implementation of algorithms via platform-solutions**

Capturing the impact of AI solutions on radiology departments and hospitals

Dimensions

- Workflow optimization
- Increase in efficiency
- Synergy of human and artificial intelligence
- Medical error rates
- Patient satisfaction
- Compliance and legal certainty
- Shift of standards
- Self-conception of radiologists
- Data stewardship

Summary

Medical Data

Data integration and contextualization

AI algorithms and applications

AI platforms

AI adoption

Commercialization of medical data

- Representative medical data from real-world medical care

Integrated AI development hubs enable data collection and contextualization

- Facilitation of IT infrastructures
- Enablement of certification process

Specialization

- Precision of AI-based assessments
- Medical need vs. economic need

Health data management

- Data protection and storage
- Harmonization of user experience

Compatibility and interfaces with hospital IT

- Standard interfaces HL7/FHIR
- Established platforms (on-premise) vs. cloud-based applications

AI success

Added value by high-quality medical data

- Availability and accessibility of data
- Validity of AI algorithms and accuracy of predictions
- Increased cost-effectiveness of medical care

Economics

- Return on investment
- Gains in efficiency and legal certainty

Acceleration of workflows: User acceptance

- Optimizing risk structure by reduced error rates:** Synergy of human and artificial intelligence

Stefan O. Schönberg

15th Biennial Symposium
of the International
Society for Strategic
Studies in Radiology
